

Proposal: Implementation of 360° Retail Digital Twin for Eastvaal Motors

Executive Summary

Eastvaal Motors is a leading South African automotive group representing 28 brands across multiple dealerships. To increase income, improve customer engagement, and modernize its online experience, Eastvaal can implement a 360° Retail Digital Twin solution. This technology will digitize showrooms and used-vehicle yards, enabling customers to virtually tour facilities, interact with vehicles, and engage with sales consultants remotely. The result is higher lead conversion, improved customer trust, and differentiated market positioning.

Why Digital Twin Technology Fits Eastvaal Motors

- Multi-brand dealerships create complex customer journeys — a digital twin simplifies exploration.
- Customers research online before visiting, driving the need for immersive digital experience.
- Eastvaal's strong footprint benefits from uniform digital representation across all dealerships.
- Remote browsing help convert more online leads into buyers.
- With 28 brands and 10+ dealerships, consider a hub page from which you can navigate to each brand on the virtual showroom with brand-specific inventory, promotions, and service offers rather than loading all into one large list.

Mike can add the link here for the webpage he is creating

- Navigation / clarity would improve – With many brands and services listed on the current 2D Webpage, the menu and site structure may overwhelm a first-time visitor. Virtual retail twin experience will eliminate this pain point.

- Enhance user-journey and filtering since you can visually show different car models next to each other of how they would look in real life.
- Global trend is indicating the dealerships with multiple brands are reducing floor room space and going online. Some of the car brands Eastvaal keeps in stock already makes use of digital twins globally.

Business Benefits

1. Increased Vehicle Sales: 20–40% rise in lead conversion from virtual engagement.
2. Boosted Used-Car Sales: Transparent 360° scans reduce buyer hesitation.
3. Higher After-Sales Revenue: Customers can view service facilities and book more confidently.
4. Stronger Online Presence: Google integration improves SEO and dealership visibility.
5. Better Lead Qualification: Customers pre-explore showrooms, saving sales teams time.
6. Premium Brand Experience: Positions Eastvaal as a digital-first automotive group.

Proposed Deployment Model

Phase 1: 360 Digitally scan the 1st dealership with full showroom, service centres, and accessories and create multi vehicle brand entry hub.

Phase 2: Add pdf documents, marketing material and anything else the dealership wants in their digital twin.

Phase 3: Link back to existing websites of the dealership

Phase 4: Roll out and integrate other dealerships into the retail twin

Value-Added Features

- Interactive points of interest for vehicle spec sheets, videos, options and links to test-drives of the model.
- Google Maps and Street View integration.
- VR-ready dealership walkthroughs.

Commercial Options

Phase 1 & 2 & 3 – Starter Pack (R..... dealership)

- Full showroom scan, hotspots, 12-month hosting.

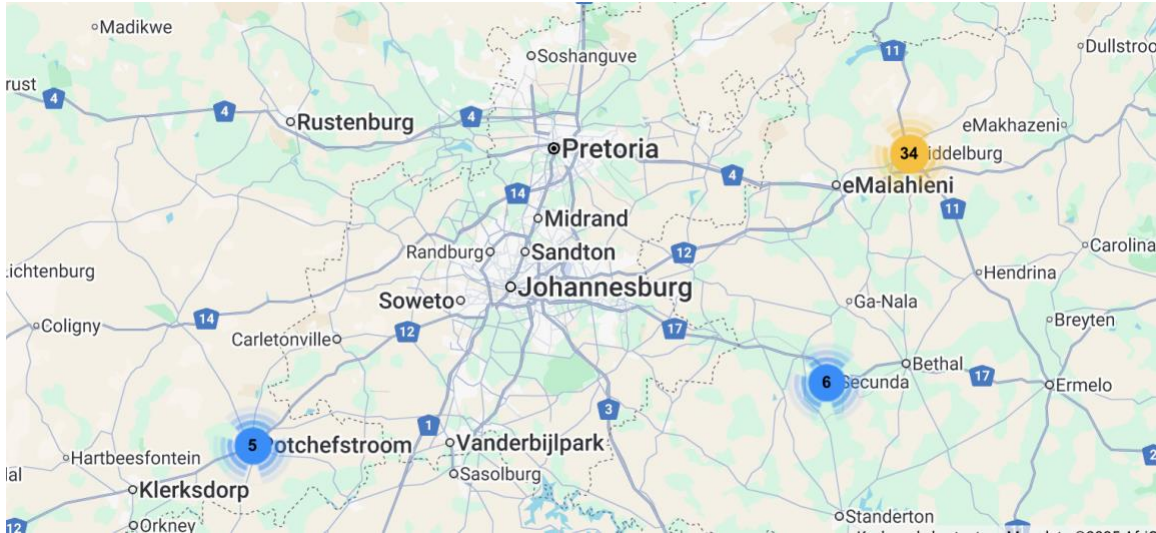

Phase 4 – Multi Dealership Digital Twin (R32,000 per dealership)

Recommendation

Start with 1 flagship dealership and expand over time. This structured rollout reduces risk and time of implementation and accelerates ROI while validating customer engagement uplift.
